

Linux is in demand. Are you?

Certify your Linux skills with LPI.

Linux certification is a great way to prove your skills and open up new job opportunities. The Linux Professional Institute (LPI) certification exams are developed with the help of industry experts to make sure they evaluate you on the Linux job skills currently in demand. With a focus on the command-line, LPI exams show you have the ability to work on any Linux distribution — providing you flexibility and mobility in your IT career.

What does this mean for you?

A successful career starts, then flourishes with a solid education. Achieving industry-recognized Linux certification proves to employers that you have the skills to do the job.

Accelerate your career with Linux.

Linux certifications differentiate your resume in a job market that's hungry for your skills. LPI provides two programs to help you achieve your career goals. Linux Essentials is designed to serve as an introduction to the fundamentals of Linux for new Linux pros or for big data, network, cloud and mobile professionals who need to add verified Linux skills to their portfolio. The LPIC program is a multi-level professional certification track geared towards Linux professionals and Systems Administrators.

- LPIC-1: Linux Server Professional
- LPIC-2: Linux Network Professional
- LPIC-3: Linux Enterprise Professional with a specialty in:
 - Mixed environments
 - Security
 - Virtualization & high availability
